Exercise: Create a Report Format and Generate a Periodical Report

Purpose

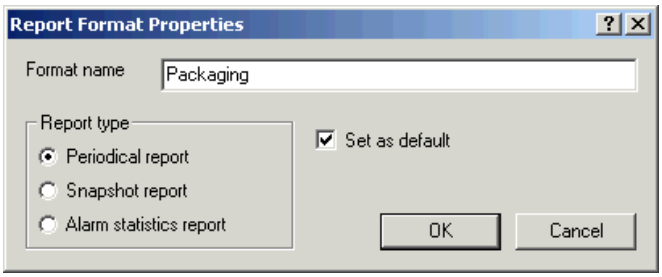

- Learn how to create report formats for printed reports.
- Learn how to generate reports.

Duration

Max. 30 minutes.

Task 1: Create a new report format and report headings

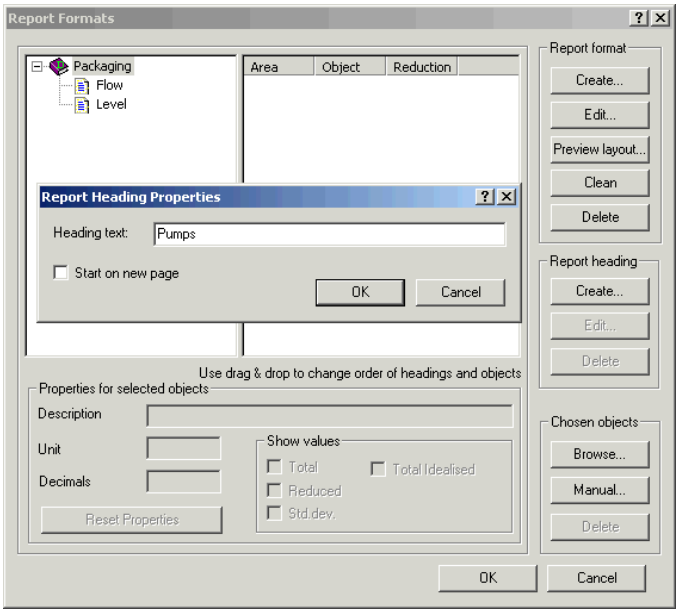

We will create a new report format for our printed reports and name the headings we want in the report.

Step	Action
1.	On the **Edit** menu, select **Report Formats**.
2.	In the **Report format** area, click the **Create** button.
3.	Create a new periodical report format called **Packaging** that covers all IGSS objects related to the packaging process. Set the new report format as default. *NOTE:* We will later use the format for generating a daily report. 

4. Create three report sections (report headings): **Flow**, **Level**, and **Pumps**.

Select the report format name, before you click the **Create** button under **Report heading**.

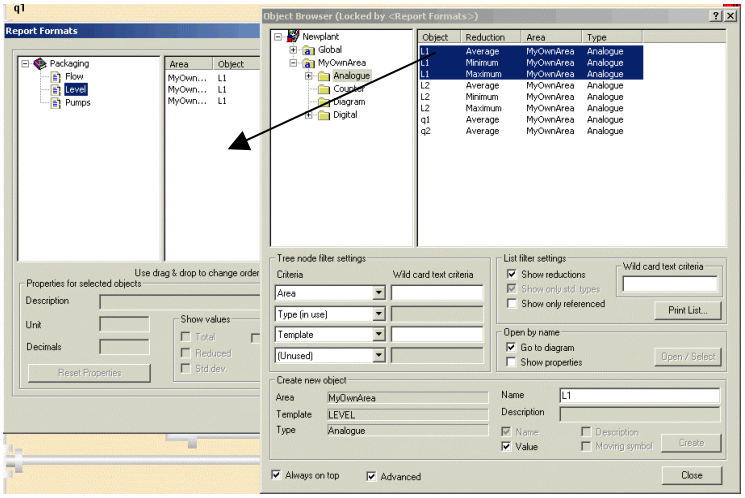

Task 2: Include the objects in the report sections

We will include some of the objects under the report headings we just created.

Step	Action
1.	Under **Chosen objects**, click **Browse**.
2.	Find the following objects and drag them onto the appropriate report headings. *TIP:* As we're defining a periodical report, only objects with data reduction(s) assigned can be used. Therefore, select the **Show reductions** check box. You can include one or more data reductions.

These objects …	**Belongs to this report heading …**
q1 and **q2**	Flow
L1	Level
P1, **P2** and **P3**	Pumps

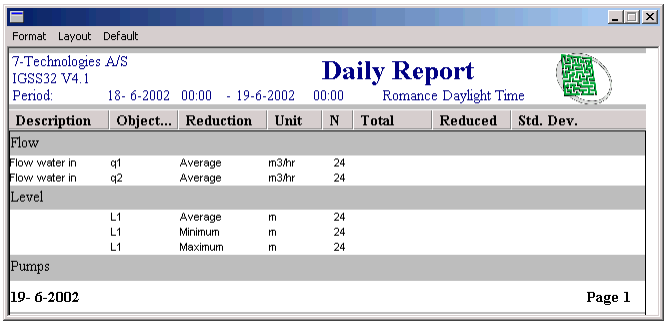

3.	Close the **Object Browser**.
4.	Select the report format name **Packaging** and click **Preview layout**.

5. Place the cursor over the vertical line between two columns and resize the columns. This is a new facility introduced in version 4.0.

On the **Format** menu, select **Save and Exit** when the layout is as required.

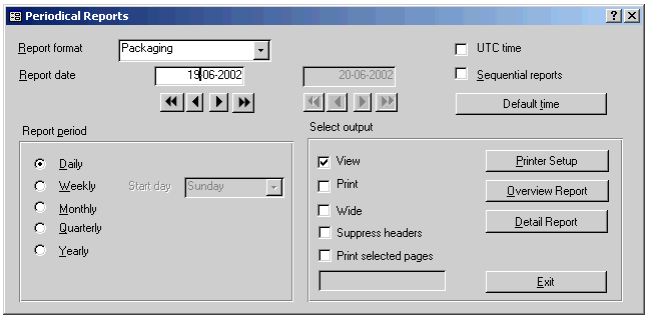

Task 3: Generate a periodical report

We will now create a daily report based on the format we just created.

Step	Action
1.	Open the **Supervise** program.
2.	Select **User Programs → Periodical Reports**. *NOTE:* The **Packaging** report format is automatically suggested, because we chose **Set as default** when we created it.
4.	Click **Overview Report** and make sure that the **View** check box is selected. *RESULT:* You will now get a preview of the report. If you select the **Print** check box as well, you will get a printed report.

YOU HAVE SUCCESSFULLY COMPLETED THE EXERCISE !!
