MultiSIM BLUE
NI Multisim Component Evaluator Mouser Edition

What is **MultiSIM BLUE**?

NI Multisim represents a best-in-class engineering design experience, both in the classroom and in the laboratory performing SPICE simulation or measurements on prototypes. With strong roots as an exploratory virtual electronics workbench, Multisim has been a primary go to tool for students and engineers alike to investigate and implement their new circuit designs and electronic inventions.
In collaboration with Mouser Electronics, a worldwide leading authorized distributor of electronic components for over 500 industry leading suppliers, offer MultiSIM BLUE. This free tool will add features and functionality to provide engineers with an industry-standard SPICE simulation environment of electronic circuits using Mouser Electronics' distributed components.,

MultiSIM BLUE offers a free, yet powerful user experience for:

- Building interactive electronic schematic designs
- Using integrated SPICE to explore the basic functional behavior of circuits
- Browsing thousands of parts, that both simulate, tie to real devices and can be built into a PCB level project
  - Large project driven database provided by Mouser Electronics
  - Can be used while disconnected
- Free integrated PCB layout, 64 layers, autorouting, 3D mechanical viewing, no board size limits.

Users are no longer stuck with their designs in a simplified toolset; MultiSIM BLUE has:

- Continuity for your educational or professional needs as all schematics can be opened and maintained in the various other tiers of NI Multisim
- The MultiSIM BLUE database (Mouser Database) can be shared and maintained across all other MultiSIM Professional and Educational tiers as well (free for all existing NI Multisim users on version 13.0.1 and above)
