Your PayScale Report™

Information. It's the key to success, whether you're negotiating a raise or mapping out a career plan. Know what you're worth in the marketplace with our highly-personalized PayScale Report.

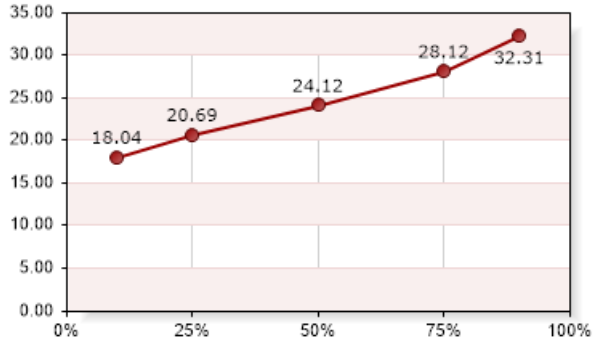

To determine your real value, there's no better method than a comparison to real employees just like you. That's why we've created Your Peer Group, the profiles in our database that most closely match yours by industry, skills, experience, location, and more. Throughout your PayScale Report, we'll compare you to Your Peer Group to help you understand how you should be compensated.

How To Use This Report:

1. **Your Profile.** Review your profile information. Double-check all the facts and ensure it's completely accurate.
2. **Your Cash Compensation.** Compare your various forms of cash compensation to Your Peer Group.
3. **Your Benefits Summary.** See how your vacation, medical, and other benefits stack up.
4. **Compensation Influencers.** Understand how experience levels, education, and more can affect your compensation.
5. **Anonymous Profiles.** View real profiles from employees within Your Peer Group.
6. **Methodology.** Learn about our techniques for gathering and analyzing data.

Methodology

Data Collection. PayScale administers the largest real-time salary survey in the world with more than 200,000 new survey records added every month. The database of more than 54 million total salary profiles is updated nightly to reflect the most detailed, up-to-date compensation information available. Our data collection is strongly correlated with the size of the pool being considered, representing the diversity of the general workforce.

People complete a salary profile on PayScale's website for many reasons, but mostly to prepare to ask for a raise, evaluate a job offer, or just to know how they stack up against others in similar positions. Upon completing PayScale's salary survey, individuals receive a series of reports that show how their salary compares to other people with similar education, skills and work experience. Individuals can also explore how changes such as moving to a different city, getting a promotion and going back to school can affect their future earning potential.

Data Standardization & Matching. Accurate compensation reporting is highly dependent on the ability to normalize and classify titles, industries, locations and other compensable factors into consistent groups. Knowing that "C++ Developer" is a kind of "Software Engineer" requires a deep understanding of the semantics of these terms as well as the core tasks performed by employees with these titles. PayScale leverages proprietary internal taxonomies as well as proprietary mappings to third party data sources to assure accurate mapping. The breadth and depth of the data assets used to standardize and match data is unparalleled in the industry.

PayScale applies a set of propriety algorithms to assure the consistency and accuracy of every data point used in our compensation models and reports. Our data team regularly compares PayScale compensation data with external sources of data, both publically and privately available. This research has shown that our market data is strongly correlated with other sources of compensation data, including employer submitted data. This research has also shown the breadth and depth of our data is wider than other sources due to our collection methods and software product, where users are able to more precisely describe and price positions, including both the type and size of the organization, and the skills and experience of the position.

Our software does not need to modify or blend profile data, use inflation or cost-of-living adjustments, or age data. This way, we help our customers avoid the shortcomings of traditional salary surveys that dilute the market data using "averages of averages" or "surveys of surveys" approaches.

MarketMatch™. The MarketMatch algorithm uses a two-step process for producing compensation data in a PayScale report. The first step is to understand which of our more than 250 compensable factors are important when it comes to pricing a job and how that job's pay is affected by these compensable factors. This is done in order to define a pay distribution for this job. The mix of compensable factors and their effect on pay is highly dependent upon the job. For example, coding languages and locations are important compensable factors for a Software Developer, while average sales prices and annual sales are important for an Account Executive. The second step is to then find the recent profiles that best match the described position in order to tighten the overall distribution from representing the job overall to the specific position described in the PayScale report.
